Profile

Senior Lead Front-End Engineer with 12+ years developing enterprise-scale React/TypeScript applications, including 8 years at JPMorgan Chase across multiple increasingly senior roles. Currently leads an 8-engineer team delivering firm-wide UI infrastructure – design systems, BI tooling, and application scaffolding – adopted across 20+ internal applications. Recognised expert in frontend platform engineering, accessible component libraries, and translating complex business requirements into scalable, production-grade UI systems.

Core Competencies

Languages: JavaScript (ES2022+) · TypeScript · HTML5 · CSS / SCSS / LESS

Frameworks & Libraries: React · Redux · Next.js · Electron · OpenFin · GraphQL

Testing: Jest · Vitest · React Testing Library · Cypress · Selenium · BDD

Design & Tooling: Figma · Storybook · Tailwind CSS · Photoshop

Practices: Agile / Scrum · WCAG 2.1 Accessibility · Design Systems · Component-Driven Development

Experience

SENIOR LEAD FRONT END DEVELOPER, JP MORGAN CHASE – 2024-PRESENT

- Lead an 8-person front-end engineering team, overseeing design and delivery of UI libraries, reusable component systems, and business intelligence tooling adopted across 20+ applications firm-wide, while mentoring engineers and managing stakeholder relationships.
- Architected application scaffolding frameworks enabling teams to bootstrap new projects using consistent, pre-approved patterns, cutting typical setup time from weeks to days.
- Serve as line of business lead for UI development within Risk Technology, steering technology choices and championing "sensible defaults" to standardise front-end development practices across teams.
- Sit on the AI working group for Risk Technology, helping steer AI use and reuse, and establishing standards and best practices for AI adoption across the area.
- Consolidated 10+ existing internal microsites into a single inner-sourced documentation pipeline with a consistent design language and searchable capability index, covering UI components, AI skills, MCPs, and APIs, reducing duplication and improving reuse across teams.

LEAD FRONT END DEVELOPER, &OPEN – 2022-2024

- Built and maintained a multi-tenant corporate gifting platform using React and TypeScript, enabling companies to deliver tailored, curated gifts to employees, clients, and stakeholders.
- Created a well-tested, fully documented custom component library of reusable hooks and functions, forming the foundation of a responsive, accessible, and secure application.
- Delivered a personalised gift recipient application and email system that adapts dynamically to each client's branding, strengthening recipient trust and reinforcing the origin of gifts.
- Collaborated closely with management, product, and design teams to translate client requirements into polished features, consistently meeting and exceeding expectations.
- Led initiatives, mentored colleagues, and contributed to shaping the company's technical direction as a senior member of the team.

SENIOR FRONT END DEVELOPER, EVOTIX – 2021-2022

- Developed the next-generation health and safety application using React and TypeScript, delivering a responsive, modern, and secure product.
- Built a bespoke JSON-to-form renderer and accompanying component library, enabling clients to independently create and configure complex custom forms without developer involvement.
- Ensured strong accessibility, internationalisation, and simplicity standards throughout, keeping the end-user experience at the centre of every technical decision.
- Collaborated closely with product and UX teams throughout the development lifecycle to validate and meet customer needs.

SENIOR FRONT END DEVELOPER, JP MORGAN CHASE – 2019-2020

- Built an Electron and OpenFin-powered desktop platform for Windows, used by multiple development teams and end users across the firm.
- Delivered advanced multi-window layout capabilities and client-side interoperability using TypeScript, React, and Redux.

FRONT END DEVELOPER, JP MORGAN CHASE – 2014-2019

- Built a modern, responsive GraphQL playground and aggregated company news application, hosting UX usability sessions with end users to validate requirements and shape both products.
- Developed a React component library adopted by multiple development teams across the firm.
- Served as key point of contact for front end design, from wireframes and proof of concepts through to production implementation.
- Built a comprehensive automated end-to-end test suite using Selenium and BDD principles.
- Took on full stack responsibilities including global business requirements gathering, design decisions, deployment pipelines, and maintaining application environment stability.
- Managed Scrum/Agile delivery processes and trained new team members on front end technologies.

Education

COMPUTER GAMES SOFTWARE DEVELOPMENT (BSC HONOURS) • SEPTEMBER 2010 - MAY 2014

Interests

- **Photography** - I am currently a freelance photographer working mainly in portrait, fashion, and sports work. This requires me to manage my own website, social media accounts, manage finances, and work with clients independently.
- **Videography** - In my spare time I work as a camera operator for various professional wrestling promotions, this includes working for such companies as WWE and ICW.
- **Wrestling** - I was previously a student at the Glasgow Pro Wrestling Asylum. This required a lot of physical ability, mental focus, and discipline.
- **Karate** - I was previously part of a Karate club for 12 years, where I achieved the level of black belt.
- **Music** - I enjoy playing both the guitar and the drums. Both of which I have been playing since 2004. I was a member of a band playing live concerts and recording original material.
